A pair of GasGrab gas cylinder lifters for lifting and carrying cylinders with a diameter of 100-102mm (4").

Perfect for manually carrying medical gas/oxygen bottle sizes D & E, as used by the NHS. The GasGrab's ergonomic handle makes for much more comfortable lifting and carrying.

Made from solid sand-cast aluminium, each lifter weighs only 600g but is proven to safely carry over 100kg weight - far more than a full cylinder of gas.
